

Helping you grow, by unlocking your business agility

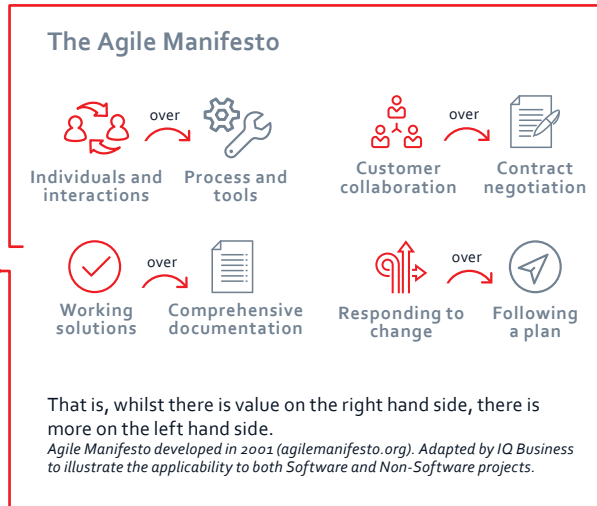

## What is Agile?

Agile is often described as a methodology, however, we prefer to call it a mind-set or a way-of-working. Agile is a set of values and principles underpinned by good practices and tools that enable the outcome that the organisation is trying to obtain. Agile is the enabler to achieve this outcome.

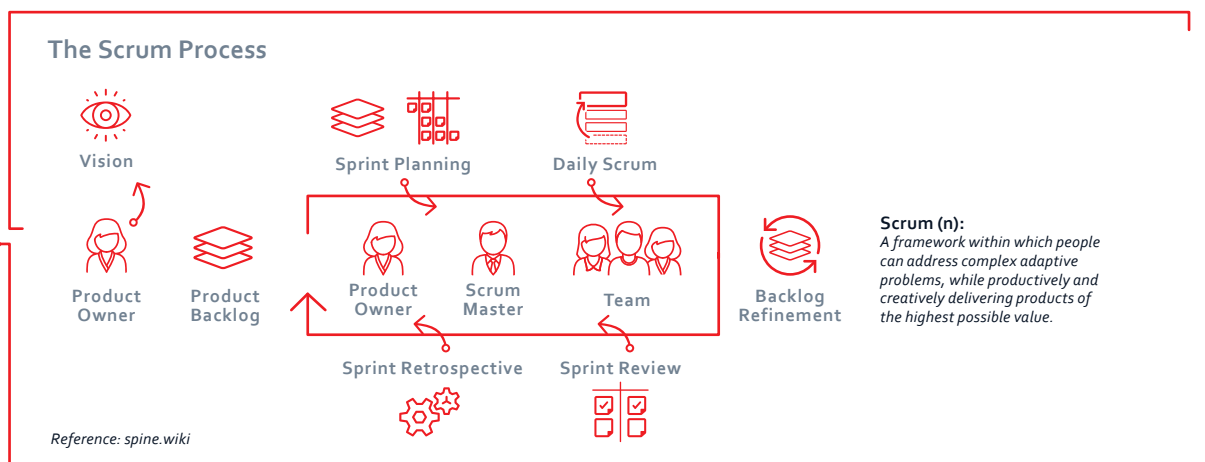

1. Our highest priority is to satisfy the customer through early and continuous delivery of valuable software (solutions).
2. Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.
3. Deliver working software (solutions) frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
4. Business people and developers must work together daily throughout the project.
5. Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.
6. The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.
7. Working software (solutions) is the primary measure of progress.
8. Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.
9. Continuous attention to technical excellence and good design enhances agility.
10. Simplicity – the art of maximizing the amount of work not done – is essential.
11. The best architectures, requirements, and designs emerge from self-organizing teams.
12. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

Agile is a set of values and principles

Scrum and Kanban are practices and tools that can be used to apply Agile

As per the above, there are several practices and methodologies that form good practices and tools that support the Agile values and principles. The most common method used according to the VersionOne, 16th State of Agile survey is Scrum, followed by Kanban.

Helping you grow, by unlocking your business agility

All organisations are in a continuous cycle of change to respond to customer needs. The speed at which organisations respond has become a lead success indicator. In addition, the ability of organisations to reduce the time for implementation means reduced cost and greater opportunity to satisfy clients. An agile approach will provide you with the capabilities required to achieve success through a three tiered approach.

**Customer Experience Management (CEM)**  
Successful Customer Outcomes (SCO)

**Execution**  
Delivery excellence

**Agile**  
Business value, early, continuously
